

Cyclone Yasi Ron Taylor – Homeowner Mission Beach QLD

"We experienced category 5 winds from the north and south which hit the long axis of our home. We were very fortunate not to have received any major damage to the house. We are very pleased with the performance of our Breezway Altair™ Louvre Windows which were specified by our designer due to Breezway's reputation and their energy efficiency. I'm glad I did my research and called a Breezway Rep before I installed the louvres because as you can see, they held up so well and prevented any damage to the home. We didn't even install air conditioning because of the natural breezes we can capture through the use of the louvres. We also have flyscreens installed so we can leave the louvres open all day and all night without worrying about insects coming in to pester us."

"We weren't home during the cyclone and opted to stay with the police in an evacuation centre. When we returned home we heard about fixed glass windows leaking in our neighbour's house."
