

Designing For Health & Aged Care

Ventilation can play an important role in occupant comfort and recovery. Breezway Altair® Louvre Windows maximise the flow of natural fresh air and daylight, helping to promote healthier wellbeing and sustainable living for residents, patients, visitors and staff.

KEY BENEFITS

Maximum Airflow

Large opening areas maximise natural ventilation performance and fresh air movement.

Strong & Durable

Extensively tested and manufactured from corrosion-resistant materials for low maintenance and long-term performance.

Proven Performance

Extensively tested to extreme conditions that meet and exceed Australian Standards for Windows in Buildings.

Flexible Design

Available in multiple frame types, blade materials, colours and configurations to suit contemporary aged care developments.

Safe & Secure

Stronghold® System is fall prevention compliant and helps restrict blade removal without compromising ventilation performance.

Automated Operation

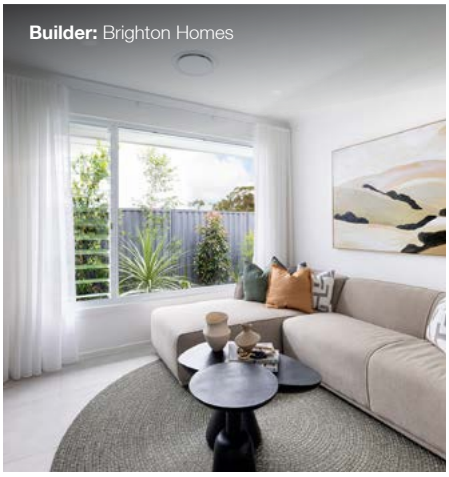

Powerlouvre™ Systems allow windows to be controlled individually or as part of an energy-efficient integrated building strategy.

HEALTHIER AIR FOR HEALTHIER ENVIRONMENTS

Breezway Louvre Windows have been incorporated into aged care residences, retirement living communities, hospitals and specialist care facilities where fresh air, occupant comfort and sustainable design are important project outcomes.

Natural ventilation provides healthy indoor environments.

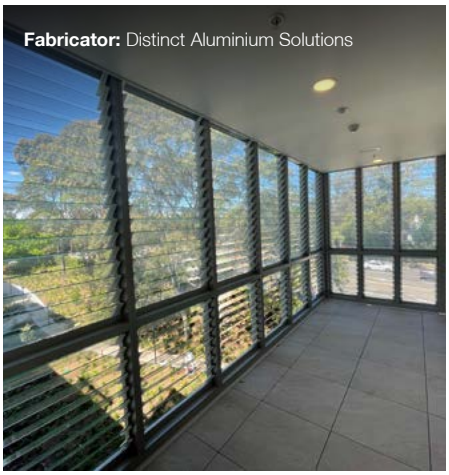

Adjustable airflow dependant on occupant needs or weather.

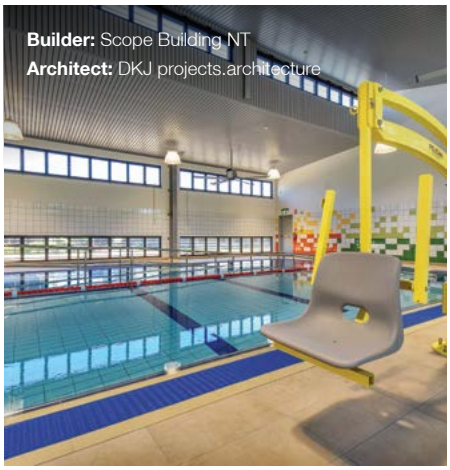

Designed to meet and exceed Australian Standards for Windows in Buildings.

Enhance comfort, safety and wellbeing.

Create stronger connections to outdoor environments.

Integrate into building management systems.
