* For gallery height only, subtract 10mm from these standard heights.

For Powerlouvre™ Standard heights.

Altair Louvre Windows are an environmentally sustainable alternative to fixed lite panels for maximising the flow of natural light and fresh breezes into a building.

Energy rated, Altair Louvres can improve indoor airflow and significantly reduce the need for artificial cooling and lighting systems.

By placing Altair Louvres on internal walls, fresh air can further ventilate throughout the interior of the building, whilst providing a connection to the outside environment to enhance the occupant's daily experience with the space.

*For Powerlouvre please note:

- Powerlouvre Windows that are 2-9 blades tall contain one motor per bay and are wired such that the entire window opens and closes simultaneously.
- Powerlouvre Windows that are 10-18 blades tall contain 2 motors per bay, one motor drives the blades in the top half of the bay and the other motor drives the blades in the bottom half of the bay.
- Powerlouvre Windows with 10-18 blades are wired such that the top halves of all the bays open and close simultaneously and the bottom halves of all the bays open and close simultaneously.
- Labelled wires emerge 1 metre from the top right hand side of the Easyscreen frame.

Altair® Louvre Galleries for Other Frames

Altair® Louvres in a Slimline™ Window System

Altair® Louvres in an Easyscreen™ Window System
